

SANT'ANNA APP

QR Code Access Manual

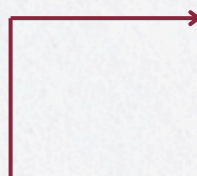

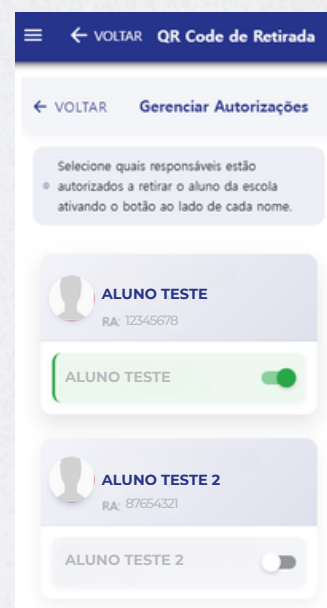

1. In the main page, select “Exit Authorization”.

2. This screen allows the management and visualization of student pickup QR Codes, as well as the management of guardian authorizations.

3. The authorization management is intended for the **pedagogical supervisor**, in accordance with the system's permission rules.

- The **pedagogical supervisor** can generate the QR Code at any time.
- The **financial guardian, father, or mother (who is not the pedagogical supervisor)** can also generate the QR Code, provided that the pedagogical supervisor has **previously authorized it through the app.**
- The **pedagogical supervisor** has the option to allow or deny the generation of QR Codes by other guardians.

4. The “Generate QR Code” button creates **a unique code for each child linked to the guardian**, ensuring that every student has their own individual exit QR Code.
5. The access process works as a **two-step authentication**:
 - The **guardian presents the QR Code** on one side of the turnstile.
 - The student performs **facial recognition** on the other side.
 - Only when both validations are confirmed does the system authorize the exit and unlock the turnstile.
